‘Knox is a place to feel safe and be safe’

Knox Community Safety Plan 2013-17
Executive Summary

Knox is a relatively safe place to live, work and participate in community life. This Plan addresses some areas of concern, builds on our community’s strengths and will enable an enhancement of people’s quality of life in Knox.

There’s never been more interest in community safety than right now. And in 2013, governments and service providers at all levels are facing a generational shift in how to realise a safer community.

In simple terms, we’ve shifted from a ‘someone will fix it’ world of ‘public safety’ to an environment in which governments and others influence and foster ‘a safer place to live’.

This plan acknowledges that shift and recognises what roles Council play – alongside others – in the City of Knox.

What does the Plan Acknowledge?

The shift in thinking, policy development and governance are captured in this inaugural Knox Community Safety Plan 2013-17. Through research and community engagement, the plan acknowledges:

- Key crime prevention policy principles that the whole sector has recognised
- Links with Council’s Vision and City Plan that enable a safer place to live
- Priorities of greatest concern or risk in our community
- The complexity of crime prevention and how to measure progress towards a safer community

What role does everyone play?

Council is just one part of the solution. This plan charts the shift to a safer community by partnering with others, leading a holistic strategic approach.

Other providers are identified and their roles acknowledged. This plan demonstrates the ways in which Council partners with stakeholders, internal and external.

Council will remain a leader and influencing partner in a range of initiatives and areas of community safety. In some areas, Council will be a lead driver, and in others, a supportive partner.
Why have a Community Safety Plan?

2.1 Community Safety in context:

2.2 Approaches to Building Community Safety.

2.3 How this Plan supports the Knox Vision and City Plan

What role does everyone play in Community Safety?

**Mayor’s Message**

It gives me great pleasure to present the Knox Community Safety Plan 2013-2017.

Knox Council proudly works with our partners in the community to make our city a safe place. The Knox Community Safety Plan is one of the ways Council is responding, along with our partners to achieve the aspirations and objectives of the Knox City Plan 2013-17 to achieve ‘Healthy, Connected Communities’.

In this 50th year since Knox first became a shire, we are proud to say our relationships with police, the community health sector and not-for-profit organisations have never been better. Those effective partnerships enable us to articulate the unique and complementary roles we all play in promoting and enhancing community safety.

Our City faces a number of challenges. This plan – the first of its kind for our City - supports a coordinated approach to addressing community safety and crime issues in Knox. It recommends activities that will both change the environment in which we live and reduce opportunities for crime and anti-social behaviour. The plan outlines the key areas we want to focus on over the next four years, sets out the roles we all play, and how we achieve a place to feel safe and be safe in.

Council looks forward to working with stakeholders and the community to implement this plan and improve the conditions of community wellbeing in the Knox community.

I commend this plan to our community as a comprehensive guide to realising this aspiration in Knox.

Knox Council Mayor
Cr Karin Orpen
Knox Police Superintendent’s Message

Victoria Police is proud to be a key partner in the Knox Community Safety Plan. This initiative provides clearly articulated guidance for all stakeholders who play an important role in keeping our community safe.

The strategic objectives of Victoria Police are outlined in our Victoria Police Blueprint 2012-2015’. They include effective police service delivery; improving community safety and working with our stakeholders. To achieve our goals, one of our priorities is to help Victorians feel safe and be safe. We cannot achieve this alone which is why working with our stakeholders is critical to our success.

Victoria police is committed to forming partnerships to respond to complex community problems and we are pleased that the Knox City Council is working with us to achieve better outcomes for our community.

Every day, police members at Rowville, Boronia and Knox Police complexes are dedicated to serving the Knox community. Their role is not purely focused on response. Crime prevention and harm reduction is at the centre of their daily duties. The vital support received through the significant partnerships detailed in this plan will ensure that the best outcome can be achieved for the people of Knox. As part of our commitment, we will continue to engage with our stakeholders to ensure they have the requisite information and feedback to help us achieve our goals.

I applaud the Knox City Council for their progressive approach to community safety. Together, we can reduce crime and make a positive impact on a safer future for all people living, working and coming to Knox.

Superintendent
Graeme Arthur
2. Why have a Community Safety Plan?

2.1 Community Safety in context:

Community Safety is the ability of people to go about their daily life with little fear of harm or injury. Crime and community safety are complex issues that are directly influenced by the actions and behaviours of the whole community.

Crime prevention is a method to address crime and community safety issues that brings about a sustainable reduction in crime.

This is the first Community Safety Plan (the Plan) for Knox and has been developed by Council together with key partners such as Victoria Police, Community Health Services, Neighbourhood Houses, community groups and representatives of the Knox community. It is important that community safety issues and crime prevention responses are identified early and implemented with the support of partners at the local level. This will allow a better understanding of issues impacting on neighbourhoods and provide increased opportunity for the community to have input into solutions.

2.2 Approaches to Building Community Safety.

There has been a significant change at the Federal, State Government and Local Government levels from the more traditional community safety definition of protection from hazard or harm to a focus on community wellbeing.

For Council to effectively respond to this change, and the complex community safety issues that impact on wellbeing it was important to develop a sustainable community safety strategy and action plan to prioritise and guide this work in the City of Knox.

Coordination between all levels of government and community key partners will be critical to the implementation and success of the Plan. The Plan has been underpinned by public policy principles drawn from key Federal and State Government policy directions that will guide the work in Knox and aims to complement rather than duplicate Council’s existing strategies and plans.

Knox Policy Principles for preventing crime and promoting safety:

Council recognises that:

- crime and the causes of crime are complex and require a multi-faceted approach to address the needs of specific locations and target groups;
- best practice and evidence-based solutions will deliver sustainable community safety results;
• committed leadership, sustainable partnerships, and consultation with all levels of government, business and communities are required;
• primary prevention and early intervention approaches to community safety issues are needed; and
• local community safety programs reinforced by higher-level strategic plans and policies will support better community wellbeing outcomes.

2.3 How this Plan supports the Knox Vision and City Plan

The Knox City Plan 2013-2017 articulates a vision for the city that: “provides a picture of the future City that will deliver the lifestyle, jobs and industry, health and wellbeing desired by members of the Knox community.” The work towards achieving this vision will not be possible if people do not feel safe where they live, work, and visit.

A key aspiration of the Knox Vision is a healthy, connected community where each member enjoys good health, both physically and mentally, feels safe, is connected to others and has access to excellent health and leisure facilities and services.

Community safety is a key objective for Council as identified in the Knox City Plan. It identifies that ‘Healthy, Connected Communities’ are communities which are “A safe community with strong community connections and where learning and volunteering are valued and supported.” It outlines that this will contribute to the overall health and wellbeing of the Knox community.
3. **What role does everyone play in Community Safety?**

A clear understanding of roles and responsibilities in community safety and crime prevention for Council, Victoria Police and the community is an essential part of enabling effective community outcomes.

The plan will enable a whole of community approach that supports:

- An improved level of collaboration to respond to community safety and crime.
- Improved community safety and prevention strategies by promoting good practice.
- Increased commitment to community safety and prevention across different professions, organisations and community settings.
- A better allocation of resources to achieve the greatest impact.

### 3.1 What role does Knox Council play?

Due to strong links with community groups and organisations at the local level, Councils are well-placed to facilitate and drive crime prevention responses to address community safety issues.

In order to address the community safety priorities identified in this Plan the role of Council is focused on leading, partnering, and influencing, together with key partners, agencies and community. The response to these priorities will centre on crime prevention programs, community safety initiatives and
mobilising community actions. It is not the role of Council to respond to, and reduce the impact of these issues alone but it is the role of Council to contribute to outcomes with many key partners.

Council provides advice, support and programs to strengthen community safety in order that neighbourhood amenity is protected, people feel safe and enjoy public spaces and individual rights are preserved. Key activities include road safety, graffiti and vandalism and crime prevention and community strengthening.

3.2 What role for Police?

The Strategic Plan for Victoria Police, *Victoria Police Blueprint 2012-2015*, is a document which describes how Victoria Police will approach police service delivery over the next three years. It provides a focus on improving community safety which aims to reduce localised crime and enhance perceptions of safety.

Council and Victoria Police together play an important role in planning and developing community safety and crime prevention initiatives and work closely with other government, local service providers and community to reduce crime and anti social behaviour.

3.3 What role for community and stakeholders?

Community safety is a responsibility that all community members share. Crime prevention programs are more effective when the community in partnership with Council and Victoria Police, are involved in the development and implementation of responses.

Similarly, active community involvement in safety initiatives helps build communal knowledge and the sharing of accurate information in regards to local crime and safety issues. This can result in communities and partners being less influenced by sensationalised media reports focusing on community safety issues, and more focused on mobilising constructive community action.
4. Where are we at?

The City of Knox is located approximately 25 kilometres east of Melbourne’s Central Business District (CBD), has a number of shopping centres, railway stations, parks and reserves. It is a vibrant, family oriented area that is characterised by a range of strengths including a generally healthy population, high levels of community participation and volunteering, strong attendance at community events, good access to facilities and services, a range of community and support groups and numerous leisure and recreation opportunities.

As one of the most populous municipalities in Victoria, the City of Knox is a diverse community with approximately 154,000 residents living in eleven suburbs.

4.1 What’s happening on the ground – a snapshot of crime figures

Reported crime and perceptions of crime are important indicators of the level of local wellbeing.

To assist the development of the Plan, a Community Safety Profile was developed that provided an overview of crime and perceptions of safety in Knox. This Profile has informed the evidence base to develop community safety priorities. The following is a summary of the Profile data.

The crime rate in Knox has remained significantly and consistently below the State average for several years. Knox is a relatively safe place to live, work and participate in community life. The current crime rate per population is 27% lower than the rate at the start of the decade.

However, there are areas of general concern particularly in relation to young people who are overrepresented in crime data and is comparable to Maroondah and Yarra Ranges municipalities in the Eastern Region:

- People aged 10-20 account for 35.2% of those charged with criminal offences in Knox, yet this age group makes up just 15.5% of Knox’s population.\(^1\)
- This age group also makes up 14% of crime victims in Knox.\(^2\)
- Over 33% of all attendances at hospital emergency departments for assault-related injuries incurred at home in Knox were by young people aged 10-24.\(^3\)

\(^2\) Victoria Police local crime statistics 2011.

\(^3\) Data drawn from Victorian Emergency Minimum Dataset collated by Monash University Victorian Injury Surveillance Unit.
• Victorian Police data shows that Knox has the highest incidents of family violence in the Eastern Metro Region in particular involving alcohol and where children were present.

![Graph showing Crime Offences 2007/08 - 2011/12](image)

**Family violence:**

• Victoria Police data indicates that family violence incidents in Knox since 2000 have consistently been the highest in the outer eastern metropolitan region.

![Graph showing Reported family violence incidents](image)
The Knox Community Safety Profile has also identified the following data relating to crime and community safety issues which has informed the development of community safety priorities for this Plan:

**Alcohol and drug use by young people:**

- A trend towards higher alcohol consumption levels amongst secondary school students in Knox compared to students in the eastern region and Victoria. *(Source: Centre for Adolescent Health - Adolescent Health & Wellbeing Survey 2009)*

**Child abuse and neglect:**

- The rate of child protection substantiations in Knox has increased over the past five years, from 3.4 per 1000 adolescents in 2005-2006 to 4.4 per 1000 adolescents in 2009-2010. *(Source – Department of Education and Early Childhood Development, Adolescent Community Profile, City of Knox, 2010).*

- This rate continues to trend upwards when compared to the Eastern Metropolitan Region (3.1/1000) and is similar to the rate across Victoria (4.4/1000).
  
  *(Eastern Metropolitan Region includes: Yarra Ranges, Monash, Maroondah, Whitehorse, Boroondara, and Manningham Local Government areas)*

**Transport – related issues including hoon or dangerous driving**

- Victoria Police perceptions of safety data for the last three years shows that the number one neighbourhood problem nominated by residents (76.4%) is hoon/dangerous driving; including burnouts, doughnuts, drag racing and excessive speeding. *(Source – Victoria Police ‘Perceptions of Safety and Crime and Safety Problems, Knox PSA, Corporate Reporting Unit, October 2011).*

**Illegal Graffiti**

- Graffiti is declining in Knox, both in the number of graffiti incidents recorded, and more particularly in the number of square metres covered by graffiti.

- Despite the decline in graffiti incidents, this issue continues to have a significant impact on the community’s perceptions of safety. *(Source: Knox City Council annual Graffiti Audit 2009-2012)*

**Perceptions of safety**

- Despite a significant reduction in crime rates, the community perceptions of safety indicate that there are areas where people feel unsafe, such as transport interchanges, walking after dark and public transport. *(Source: Victoria Police ‘Perceptions of Safety and Crime And Safety Problems, Knox PSA’, Corporate Reporting Unit, October 2011)*

---

*DEECD Adolescent Community Profile 2010*
Mental Health

Mental health disorders are the second highest cause of death and disability (burden of disease) in Knox for both males and females. Mental health has a strong link with community safety issues such as family violence issues and child neglect. (Source: Knox Community Health & Wellbeing Profile 2009-2013.)

Problem gambling

Since 1992-93 $1,737,000 has been lost on Electronic Gaming Machine’s in Knox, the 6th highest total for all Victorian municipalities. (Source – Productivity Commission 2010). The prevalence of problem gambling has a strong link with community safety and crime issues such as family violence, child neglect, mental health issues due to the financial stress of problem gambling.

4.2 What do local people think about safety?

The largest and most significant community engagement project Knox@50 project took place from January 2012 to February 2013. This project involved many diverse community engagement opportunities for the community and provided feedback about what is driving change within the Knox community.

A key theme identified through this process was community safety both actual and perceptions of safety and particular issues such as: graffiti, hoon driving, road safety and cyber bullying are of concern to the Knox community. This plan and the Knox City Plan 2013-2017 respond to those concerns. Cyber bullying is also a key priority for the Knox Youth Strategic Plan 2012-2017.

4.3 What are Council and other stakeholders doing about safety?

Council currently has several strategies that respond to community safety issues, including the:

- Knox City Plan 2013-2017;
- Knox Community Health and Wellbeing Strategy 2009-2013;
- Knox Youth Strategic Plan. 2012-2017;
- Knox Municipal Early Years Plan - Off to a Flying Start 2011-2015;
- Knox Healthy Ageing Strategy 2009-2013;
- Knox Arts and Cultural Plan 2012-2022;
- Knox Access and Inclusion Plan – for people with disabilities 2011-2015;
- City of Knox Emergency Management Plan;
Community safety issues are also being addressed through a number of initiatives and working groups, including graffiti management programs and the Knox Safer Communities Group - a collaboration of Victoria Police and Knox City Council staff with community safety and crime prevention expertise.

The Knox Safer Communities Group provides leadership on:

- Reducing opportunities for crime and improving perceptions of safety;
- Reducing fear in local neighbourhoods by implementing partnership responses to public space safety issues, particularly around perceptions of safety; and
- Delivering projects focused on crime prevention through environmental design principles that includes projects that focus on appropriate lighting, designing out “dark spaces”, and enhancing public space through mural and public art projects.

The Knox Safer Communities Group will guide, support and provide expert advice to oversee the implementation of this plan. A revised membership, terms of reference and purpose for this Group will be developed to support the successful implementation of the Plan.

5. What will this plan deliver?

The Plan’s objective is to guide actions undertaken by Council, key partners, the community, and organisations to address issues of real and perceived community safety through sustainable crime prevention programs.

Identified community safety priorities will be delivered using an evidence-based, partnership approach. The Plan will be progressively monitored, reviewed and evaluated to support the achievement of the best possible outcomes for the community.
5.1 What we are aiming to achieve

The Plan aims to improve conditions of community wellbeing in the Knox community and recognises this will take a committed effort and strong leadership over a long period of time.

5.2 Our community safety vision

Based on input from Knox community representatives and key internal and external partners, a shared vision statement for community safety has been developed as follows:

“Knox is a place to feel safe and be safe”

5.3 Guiding Policy, Principles and Approaches

It is envisaged that Council and all key partners will embrace the following principles and approaches when responding to community safety priorities.

Council recognises:

- That crime and the causes of crime are complex and require different solutions to address issues in particular locations
- That best practice and evidence-based solutions will deliver sustainable results
- That committed leadership, sustainable partnerships, and consultation with all levels of government, business and communities is required
- The need for primary prevention and early intervention approaches
- That local programs reinforced by higher-level strategic plans and policies will support better community wellbeing outcomes.

Council and key partners will approach our work to:

- Promote community safety as a right of all people who live, work and visit Knox
- Encourage the community to take responsibility for their own safety, and the safety of others.
- Enable everyone who live, work and visit Knox to do so without fear, whether it is real or perceived, regardless of race, gender, status or diversity.
- Enable community members to be proud of our community.
- Encourage strategies and actions that value our community, and support each other to feel safe and empowered at home, in public, and in the workplace.
- Contribute to a respectful, resilient and nurturing environment.
5.4 Community Safety Priorities

Community safety priorities for Knox were identified through a rigorous research, data analysis and community consultation process and reflect a range of issues that are relevant to many communities and some specific to the City of Knox.

The community safety priorities identified are:

- Young people and safety;
- Anti-social behaviour;
- Child abuse and neglect;
- Family violence;
- Transport-related issues including ‘hoon’ or dangerous driving;
- Graffiti;
- Perceptions of safety;
- Mental health issues; and
- Problem gambling.

These community safety priorities are directly linked with the following strategies of the City Plan 2013-17:

- To improve personal and community safety and perceptions of safety in Knox, including addressing family violence and child abuse; and
- To improve mental health in the Knox community, strengthen awareness and understanding about mental health issues and improve the availability of support services.

The Plan recognises that community safety priorities do not occur in isolation and that there is an underlying relationship that links crime and community safety issues and their causes. The proposed community safety programs and activities have been developed to identify these links and to reduce their impact on a number of community safety priorities.

For example, the research affirms that the impact of harmful alcohol consumption has significant impacts on all of the community safety priorities with the possible exception of graffiti. If a concentrated effort is focused on extensively reducing the impact of harmful alcohol consumption then it would be expected there would be a reduction in other priority community safety issues.

A further detailed analysis of the causes and linkages between community safety issues is identified in the ‘Community Safety Relationship Matrix’ located at Appendix B.
5.5 The Desired Community Safety Outcomes

For each community safety priority area there is a condition of wellbeing (or outcome) statement to provide guidance on what the Plan is aiming to achieve. These are outlined below:

1. **Young people are resilient, safe and connected to their community.**  
   *Priority Area:* Addressing young people and safety.

2. **A community that is resilient and strong.**  
   *Priority Area:* Addressing anti-social behavior.

3. **Children live in stable and supported families and communities.**  
   *Priority Area:* Addressing child abuse and neglect

4. **Families and partners have healthy, equitable relationships and live free from violence.**  
   *Priority Area:* Addressing family violence

5. **The community has safe and accessible transport options.**  
   *Priority Area:* Addressing safe and accessible transport.

6. **Public places and spaces are well maintained and the community feels safe.**  
   *Priority Area:* Addressing graffiti

7. **People have an increased awareness of their relative safety in Knox.**  
   *Priority Area:* Addressing perceptions of safety

8. **Young people and adults are resilient and have high levels of emotional and psychological wellbeing.**  
   *Priority Area:* Addressing mental health issues

9. **Families are supported to prevent problem gambling**  
   *Priority Area: Addressing Problem gambling*

Included at Appendix C (Community Safety Priorities Research) is an overview of the research outcomes and the story behind each community safety priority for Knox. This information will support monitoring and evaluation of the Plan and endeavor to increase a greater understanding of the link between program outcomes and a reduction in community safety issues.
5.6 Objectives, Strategies and Actions.

In order to work towards achieving these outcomes, community safety action plans have been developed based on best practice crime prevention and community safety strategies. These Action Plans aim to:

- Reduce risk factors and increase protective factors for young people;
- Deliver community safety education, strengthening and development programs;
- Address the built and natural environment through ‘Crime Prevention Through Environmental Design’ to reduce opportunities for crime and increase personal safety and perceptions of safety;
- Increase community action and effort to respond to these community safety priorities; and
- Collect and analyse data to inform current and ongoing community safety work.
6. Action plans

6.1 Young people are resilient, safe and connected to their community

Objectives:

- Foster and enable a change in community attitudes to the supply of alcohol and alcohol drinking culture particularly for adolescents.
- Increase the protective factors and decrease risk factors for young people in Knox.
- Improve community perceptions of young people.

7. Monitoring, Resourcing and Evaluation

In order to effectively assess the success of the Community Safety Plan, a clear approach to monitoring and evaluation has been developed.

The Plan outlines a monitoring and evaluation approach based on the Result Based Accountability framework. This approach endeavours to increase a greater understanding of the link between program outcomes and changes in the community. This process will involve monitoring and evaluation of key indicators to provide both Council and the community with an annual ‘report card’ on progress. This will be used to identify if the strategies are making a difference in the community. This in turn will assist Council and partners to make decisions to either continue, change or stop a program.

Monitoring and evaluation of programs and initiatives will, wherever possible, be based on local analysis, local needs and local participation.

The annual ‘report card’ will focus on the programs and initiatives with which Council is the lead agency. Other initiatives not led by Council will be evaluated by the relevant lead agency in collaboration with other partners.

7.1 Resourcing

The resources required to deliver programs in the Plan will involve a mixed contribution from Council, external funding grants, shared resource funding models with key partners, and community support to deliver low cost and/or no cost programs.

Council’s role of the Knox Safer Communities Group will be to investigate opportunities for shared resourcing of initiatives, and opportunities to seek funding from other funding sources to support the full implementation of the Plan.
Appendix

a: How did we develop this plan?

The key steps in developing the Plan are summarised in Figure, below

Step 1: Knox Community Safety Profile
Extensive research was undertaken to understand crime statistics and data in Knox and the broader Eastern Metropolitan Region to inform the development of the Community Safety Plan for Knox

Step 2: Literature Review
Background research on issues of Community Safety to better understand local and international crime prevention approaches was completed

Step 3: Analysis
Findings of Steps 1 & 2 were analysed to inform the development of the community consultation methodology and Community Safety Plan more broadly.

Step 4: Community Consultation
A series of activities to inform the development of the plan including workshops with internal Council staff and the community, a community survey and consultation with key groups.

Step 5: Draft Plan
Through consolidations the Knox Safety Profile, literature review and community consultation, a draft Knox Community Safety Plan was developed.

Step 6: Community Consultation
Community consultation for a broader community feedback process to inform the final plan was undertaken

Step 7: Final Plan
Following feedback received from community and our partners on the draft Knox Community Safety Plan, the final plan was endorsed by Council June 2013.

Figure 1: Development Methodology
**b: Community Safety Relationship Matrix**

The Plan recognises that community safety priorities do not occur in isolation and that there is an underlying relationship that links crime and community safety issues and their causes.

For example, the research affirms that the impact of harmful alcohol consumption has significant impacts on all of the community safety priorities with the possible exception of graffiti. If a concentrated effort is focused on extensively reducing the impact of harmful alcohol consumption then it would be expected there would be a reduction in other priority community safety issues.

This matrix outlines the relationship (where applicable) between priority Community Safety issues.

This matrix has informed the responses outlined in the Community Safety Action Plan and will continue to inform the implementation of the Plan.
### YOUTH

**Perceptions of Safety**

- Young people are more likely to be fearful of crime and violence.
- Young people who binge drink are at increased risk of becoming involved in criminal activity.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.
- Young people who are involved in criminal activity are at increased risk of experiencing poor school performance, poor peer relations and mental health disorders.

**Antisocial Behaviour**

- Young people are more likely to engage in antisocial behaviour.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.

**Family Violence & Gender Equity**

- Family violence has a substantial impact on children's emotional, cognitive, developmental and educational wellbeing.
- Family violence has a substantial impact on children's emotional, cognitive, developmental and educational wellbeing.

**Transport & Access**

- Public transport is an important factor in violence at home.
- Public transport is an important factor in violence at home.
- Public transport is an important factor in violence at home.

**Graffiti**

- Graffiti is a significant correlate of delinquency.
- Graffiti is a significant correlate of delinquency.
- Graffiti is a significant correlate of delinquency.

**Mental Health**

- Mental health issues are common among young people.
- Mental health issues are common among young people.
- Mental health issues are common among young people.

### Child Abuse & Neglect

**Perceptions of Safety**

- Children who are abused are at increased risk of becoming involved in criminal activity.
- Children who are abused are at increased risk of becoming involved in criminal activity.
- Children who are abused are at increased risk of becoming involved in criminal activity.

**Antisocial Behaviour**

- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.

**Family Violence & Gender Equity**

- Family violence has a substantial impact on children's emotional, cognitive, developmental and educational wellbeing.
- Family violence has a substantial impact on children's emotional, cognitive, developmental and educational wellbeing.

**Transport & Access**

- Public transport is an important factor in violence at home.
- Public transport is an important factor in violence at home.
- Public transport is an important factor in violence at home.

**Graffiti**

- Graffiti is a significant correlate of delinquency.
- Graffiti is a significant correlate of delinquency.
- Graffiti is a significant correlate of delinquency.

**Mental Health**

- Mental health issues are common among young people.
- Mental health issues are common among young people.
- Mental health issues are common among young people.

### Family Violence & Gender Equity

**Perceptions of Safety**

- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.

**Antisocial Behaviour**

- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.
- Young people who are involved in criminal activity are at increased risk of becoming involved in drug use and crime.

**Transport & Access**

- Public transport is an important factor in violence at home.
- Public transport is an important factor in violence at home.
- Public transport is an important factor in violence at home.

**Graffiti**

- Graffiti is a significant correlate of delinquency.
- Graffiti is a significant correlate of delinquency.
- Graffiti is a significant correlate of delinquency.

**Mental Health**

- Mental health issues are common among young people.
- Mental health issues are common among young people.
- Mental health issues are common among young people.

<td>Schools in Knox are particularly concerned about the mental health of students, including anxiety, depression, low self-esteem, body image, loss and grief (particularly during parental divorce), and suicidal thoughts. Ensuring a safe and supportive environment for students, families and schools can reduce the risk of harm, including involvement in substance abuse, violence and crime. Young people living with a parent with mental health issues particularly need support to ensure their education and social development are not unduly impacted. Some people with particular types of mental illness that is not well-controlled may engage in antisocial behaviour which is confronting for witnesses and potentially dangerous. Child abuse and neglect may result from mental health issues of the parent(s), and has serious implications for the current and future mental health of the child. Family violence is detrimental to the mental health and wellbeing of victims and witnesses, particularly children. Some violence in the home may be due to mental stress on the part of the perpetrator.</td>
<td>Although rare, aggressive or antisocial behavior on public transport by a person with a serious mental illness can be frightening for witnesses. Lack of access to safe, reliable public transport to perform routine activities can have a negative impact on the mental health of non-drivers.</td>
<td>No direct links</td>

**Risk Factors:**
- Young people are over represented in crime rates in Knox as the perpetrator and victim
- Alcohol and drug related issues
- Family conflict
- Low commitment to school
- Favourable family attitudes to anti social behaviour.

**What would the results look like?**
- Young people actively involved in community activities.
- Young people engaged in education and participating in the community.
- Young people are resilient.
- Young people are healthy and safe.
- Nurturing community of young people.
- Community have positive perceptions of young people.

**Indicators: How can we measure?**

### Risk and protective factors for young people in Knox

- **Adolescent Health & Wellbeing Survey years 7,9 &11 2009**

### Alcohol related hospital admissions 15-24 yrs

- Victorian Injury Surveillance Unit annually
- Secondary supply data for Knox

### Secondary Data to monitor:

- %Crime and Victim rates for Young people in Knox
  (Victoria Police data)
- % parental participation in schools
  Community Indicators Victoria every 4 years (secondary data)
- % of young people who are engaged in education or work
  Community Indicators Victoria every 4 years (secondary data)

---

**Please note:**

- Black line segments represent the confidence intervals surrounding the data.
- The length of a confidence interval is dependent on the sample size.
- Although sample sizes for Knox were small, the data is indicative of historical estimates.

---

Estimated prevalence of alcohol consumption amongst young people.

Protective factors amongst young people: Knox versus Eastern region versus Victoria (2009) (C = community; S = school; F = family; PI = peer/Individual)
Partners
Youth Services, Communities that Care Ltd., sporting clubs, community groups, Leisure Works, Health Services, University of the Third Age, older citizen groups, Victoria Police, schools, churches, Knox businesses, other identified service providers.

What are the key strategies to achieve this?
Best practice – A governance model is currently being developed for the Communities That Care Ltd. for Knox. This program is supported by the Centre for Adolescent Health and the Royal Children Hospital – this model is an internationally acclaimed program that specifically focuses on increasing the protective factors and decreasing the risk factors in young people including working with their families. Lead organisation for this program is Knox Community Health Service and Council a partner.

Knox City Council Youth Plan has a focus on increasing protective factors and decreasing risk factors and will link with actions in the community safety plan – there are a number of programs already operating that focus on some of these issues such as bullying, youth support and advocacy service, school failure, youth participations and engagement.

Programs to be initiated over the life of this plan include – Headspace and the Knox Innovation, Opportunity and Sustainability Centre – aims to equip students with real life employability skills for transition to further study and work.

Story behind the Baselines. How are we doing on the most important issues?
Although the crime rate in Knox has been consistently below the state average over the past nine years - Crime data for 10/11 indicate people aged between 10 and 20 years account for 35% of people charged with offences in Knox yet this age group makes up just 17% of the population. This age group makes up 14% of reported crime victims in Knox.

Adolescent health and wellbeing survey results for 2009 report that a significantly higher proportion of surveyed young people binge drink compared to the eastern region and Victoria. The survey indicates that risk factors in particular from Year 7 to 11 students in Knox include ease of drug availability in the community including alcohol, academic failure, low commitment to school, poor family management, family conflict, family attitudes favourable to anti social behaviour low perceived risks of drug use and friends drug use. Overall the survey indicates a large proportion of young people in Knox are exposed to high levels of risk factors (such as those for year 7) and low levels of protective factors, with the implication of less than optimal development in the future.

Through community consultation - young people are telling us that bullying, community perceptions of young people – community report they feel unsafe when young people “hang around”, young people Knox feel they have a poor relationship with Victoria Police and want to make it better. Alcohol and all the issues associated with it – impact on young people in Knox – anti social behaviour, violence, health issues, Health and wellbeing survey indicates just over 50% of young people in Knox who have ever drunk alcohol get their drinks from home. Young people also report feeling unsafe at transport interchanges, and would like more places to hang around in to feel safe.

There is opportunity to build on the protective factors for young people in Knox which include opportunities for pro social involvement at school and reward, and emotional control however young people in Knox do show lower trends for these protective factors but not significantly compared to the eastern region and Victoria.

Partners
Victoria Police, Communities that Care, Knox City Council Youth Services, licensed premises.

What are the key strategies to achieve this?

Collaborative programs that provide opportunity for all relevant partners to deliver outcomes across the municipality. This would include engaging with local media and Victoria Police to delve community messaging around reporting crime etc to promote behaviour change and community responsibility on this issue. Timely data sharing between agencies particularly Victoria Police and council to enable targeted initiatives and Crime Prevention Through Environmental Design principles to reduce the opportunity of anti social behaviour in particular hot spot locations. Exploring programs that focus on community connections, respectful relationships and responding to challenging behaviour.

Communities that care collaboration will also respond to working in the community to reduce risk factors and increase protective factors in young people.

Story behind the Baselines. How are we doing on the most important issues?

Anti social behaviour is very subjective by nature and is difficult to get a clear understanding of what it actually is, Victoria Police class anti social behaviour in a class of public order offences such as abusive/obscene/insulting/threatening language/drunken offensive/disorderly indecent, riotous behaviour. In Knox the statistics for the last few years show the rate of offences to be significantly lower than the state or Melbourne metro average and generally trading downward. Despite this anti social behaviour is perceived as a significant concern to the community. However, low level harassment or public disorder can have a large impact on perceptions of safety in particular alcohol related antisocial behaviour.

Research has consistently shown that the concentration of liquor outlets is predictive of alcohol related issues (Donnelly et al 2006)

The outcomes of the community consultation indicated the community experiencing:

- Alcohol misuse was felt to be associated with a ‘culture of drinking’ prevalent in the community.
- Transport interchanges and shopping centre were seen as unsafe areas due to the prevalence of people ‘hanging around using bad language.
- Victoria Police reported that anti social behaviour has an impact on the communities sense of safety but no one is reporting incidents when they occur – such as drunken behaviour. Victoria Police requested that a focus of the plan should target community education around reporting incidents to Victoria Police.

Community Safety Plan Action Plan Priority 3 – Children living in stable and supported families and communities (Child abuse and neglect)

| Desired Outcome | Children live in stable and supported families and communities |

Population – who are the people you are targeting?

Families

What would the results look like?

- Happy and healthy children.
- Children who meet their milestones.
- Children who have a high level of physical, emotional and spiritual wellbeing.
- Children living free from violence.

Indicators: How can we measure?

- % of child abuse substantiations (Department of Human Services) annually
- % of hospital presentations for home assaults (young people) Victorian Injury Surveillance Unit annually
- % of children on track developmentally (Australian Early Development Index) 3-4 years
- % of re-reports of child abuse and neglect (Department of Human Services)

Partners

Yarra Ranges Shire Council, mental health services, schools, preschool/childcare centres, Office of Housing, Infolink, Department of Human Services, Victoria Police, Salvation Army, Anglicare, Knox Community Health, Knox City Council Planning, Knox City Council Youth Services, Centrelink, Sporting Clubs, Department of Education & Early Childhood Development teachers, Knox City Council Maternal and Child Health nurses, Eastern Health, family support agencies, Women’s Health

What are the key strategies to achieve this?

Knox City Council is providing specialised training to its Maternal and Child Health Nurses to identify indicators of child abuse and neglect, as well as family violence.

Risk identification and formal referral between services from Maternal Child Health onwards.

Education and support for vulnerable families.

Community strengthening building activities for vulnerable families.

Resourcing of services.

Focus on family resilience.

Education and awareness programs that focus on early intervention.

The forthcoming ‘Pairs’ program will work with ‘at risk’ families to increase parent and child interaction and connectedness and build bonding relationships.

Knox City Council has a draft Municipal Early Years Plan Off to a flying start 2011-2015. The plan does not specifically address child abuse, but has a Strategic Priority Action Area to support and empower families who may be experiencing disadvantage.
Knox is participating in the Child FIRST (Family Information Referral & Support Teams) program which aims to effectively link families with service appropriate community based service providers.

The Basin Boronia Bayswater project supports families in these suburbs to increase school and preschool participation, connect vulnerable families to services, and aims for long-term changes in family resilience and capacity to support children over time.

**Story behind the Baselines. How are we doing on the most important issues?**

Children who are subjected to abuse and neglect may experience poor school performance, learning disorders, antisocial behaviour and mental health disorders (Paolucci et al 2001).

The rate of child protection substantiations in Knox has increased over the past five years, from 3.4 per 1000 adolescents in 2005-2006 to 4.4 adolescents in 2009-2010. In 2009-2010 the rate of child protection substantiations in Knox was higher than the rate in the eastern region for adolescents (3.1 per 1000) and similar to the rate across Victoria (4.4 per 1000).

(Source Department of Education Early Childhood Development Adolescent Health Profile 2010).

The data obtained direct from Department of Human Services is slightly different due to figures for children 0-17 rather than just adolescents. It shows a rate of substantiated child abuse reports of 4.7 in 2006 to 5.1 in 2010. The rate shows a somewhat significant increase from 4.2 in 2008 to 5.1 in 2010. The rate for all three outer eastern metro council’s appears volatile, with no clear trends emerging.

As a rate per 1000 children, Bayswater, Boronia and Wantirna have the highest rates of child abuse reports. However Boronia overtakes Bayswater for substantiated reports as a rate per 1000 children.

The rate of young people aged 15-19 attending emergency departments due to assault injuries incurred at home is significantly higher than for Melbourne and Victoria as a whole. The figure per 1000:

- Children home alone was identified as a problem in Knox including where both parents work full time and primary aged children stay home on their own.
- It was also reported that a high percentage of sole parent households live in Knox.

Partners who attended a workshop also indicated that increase substantiation rates could be impacted by:

- Increased and mandatory reporting.
- Increased pressure (financial, social, substance abuse) on families.
- Greater awareness in schools in understanding the signs of abuse and neglect.
- Problem gambling, housing affordability, prevalence of drug and alcohol abuse, increased mental health issues, family violence.
- Issues with blended families, sibling to sibling abuse.

Increased trust within and between agencies in relation to reporting systems and processes linked to child abuse and neglect.

Partners

- Welfare agencies that respond to family violence.
- Health – Knox Community Health Service.
- Victoria Police
- Schools, early childhood, education.
- Preventing Violence Against Women Project.
- Women’s Health East
- Church and cultural groups (Migrant Information Centre, Aboriginal Services, Mullum Mullum Healing service).
- Eastern Football League and other sporting groups.

What are the key strategies to achieve this?

Family violence has been identified as a priority area in the Community Health & Wellbeing Strategy, the Community Strengthening & Social Equity Plan and will be the subject of closer scrutiny in coming months as the $4 million Preventing Violence Against Women Outer East pilot project gets underway. This world-first project will work within the five key settings identified in the State government’s Right to Respect plan discussed above.

The Outer East Preventing Violence Against Women Strategic Alliance has been formed to enhance information sharing and communication between various agencies, including legal services, crisis support, Victoria Police, council and Neighbourhood Houses. Knox also works closely with local Victoria Police on this issue as part of the Community Health and Wellbeing Reference Group and the Safer Communities Group.
Public education campaigns that promote no tolerance to violence and gender equity.
Legislation and policy.
Individual support for vulnerable families.
Increasing community ownership of respectful relationships through school sporting clubs and gender equity programs involving community in the solutions including grass roots, advocacy campaigns, mass media, social media and public action.
Cultural change at sporting clubs.
Service pathways for example through Maternal and Child Health nurses.
Intensive programs that focus on repeat family violence offenders through tactical support for Victoria Police.
Baby makes three parenting programs.

**Story behind the Baselines. How are we doing on the most important issues?**

Violence against women is a serious public health issue. Research indicates the profound and long-term toll that violence takes on women’s health, on families, communities and on society in general. (Women’s Health East 2011). In particular, family violence has a substantial impact on children’s emotional, cognitive, developmental and behavioural wellbeing. A recent review of the research literature found “convincing evidence that children exposed to family violence ‘are more likely to experience higher rates of depression and anxiety, trauma symptoms and behavioural and cognitive problems’. This can affect a wide range of outcomes or areas of functioning in children, including learning, social and relationship capacity, attention and personality development” (Wilcox 2012:4).

Ferntree Gully and Boronia account for the highest number of reported family violence incidents in Knox over the last decade.

Knox has a high number of family violence reports, especially involving alcohol and in the presence of children

Victorian Victoria Police data (which is likely to be an underestimate) shows that children were present at 37% of family violence incidents in Knox in 2010/11. This is higher than the Victorian average (35%), but less than the Eastern Metropolitan Region average of 40%.

The community consultation in Knox indicated that:

- Family violence was identified as a prevalent, but hidden issue in Knox, but because of lack of reporting, the incidence of family violence is much higher than what the statistics show.
- Reports from consultation have identified that family violence is on the increase in Knox.
- It was felt that there is a need to support at risk women and children in the community.
- Gender equity was identified as a related-issue, but is broader than family violence and also impacts women in public places and in the work place.

Partners who attended a workshop also indicated that increase substantiation rates could be impacted by:

- There is community support for increased reporting of family violence incidents and less tolerance of turning the other way.
- Better reporting mechanisms for family violence incidents and mandatory reporting particularly in hospitals.
- Increased pressures on the family unit such as financial pressures post Global Financial Crisis, mortgage stress, problem gambling, alcohol and drug abuse, aggression and mental health issues and employment pressures.
- Gender equity and women’s position in society encompassing values, culture and roles at the micro level.
- The media’s influence.

Victoria Police data from 2008-2011.
Partners

Victoria Police, Knox City Council Traffic and Transport, VicRoads, Roadsafe, Knox City Council Local Laws, public transport authorities, schools, sporting clubs

What are the key strategies to achieve this?

Sustainable and evidenced based behaviour change programs that target dangerous driving, partners understanding their roles and responsibilities, increasing and understanding what is driving perceptions that areas are unsafe and developing collaborative programs to reduce those issues.

Implementing crime prevention through environmental design initiatives at public transport interchanges and high profile pedestrian access roots throughout the community.

Story behind the Baselines. How are we doing on the most important issues?

Hoon driving as confirmed by Victoria Police data (perceptions of safety survey) and Community safety survey conducted by the community safety team during 2012 was nominated by residents as a key safety issue. Through the community survey it was also identified there are major issues with the under reporting of hoon driving offences in the community “as many people do not want to be involved in any court proceedings or identifying hoon drivers. Other issues also identified were car egging, and unsafe crossings in particular school crossings.

Connectivity of walking paths including safer crossings for people with disabilities were identified as

Although the rate of drink driving infringement notices in Knox is well below the Victorian average there are pockets of high rates including Wantirna and Wantirna South, followed by Boronia and Bayswater.

Through the community safety survey conducted by Knox City Council in 2012 safety around transport interchanges was of concern to the community and can be a barrier to using public transport, this perception was also confirmed during the community consultation session with partners, including feeling unsafe on bike paths particularly at night. Safety around school crossings was identified by the community as an issue and promoting safe and sustainable transport to school options was viewed as a challenge.

Community Safety Plan Action Plan Priority 6 – Public places and spaces are well maintained and the community feels safe (Graffiti)

<table>
<thead>
<tr>
<th>Desired Outcome</th>
<th>Public places and spaces are well maintained and the community feels safe</th>
</tr>
</thead>
</table>

Population – who are the people you are targeting?

Community including businesses and traders.

What would the results look like?

- Public places are graffiti free.
- The feeling of community pride and sense of safety.
- Public art murals are supported and enhance amenity.
- Private property is maintained, graffiti free.

Indicators: How can we measure?

- The annual graffiti audit (Knox City Council survey)
- Percentage of people who think that graffiti is of concern to them and their neighbourhood. Please note: Graffiti is included as vandalism (Victoria Police)
- Secondary to be monitored data. Victoria Police Crime Data arrests for graffiti offenders in Knox.
- Knox City Council Graffiti Audit

Partners

Victoria Police, Knox City Council Teams – Parks, Facilities and Works, Traders, Businesses, Schools, Volunteers, Community.

What are the key strategies to achieve this?

Knox City Council has implemented a Graffiti Management programs through a Council endorsed plan since 2002. The aim of the plan was specifically focused on graffiti prevention and management to reduce the social, environmental and economic impact of graffiti and vandalism related activity in Knox. The plan included a multi-faceted approach consisting of education, prevention and removal strategies and incorporates zero tolerance strategies. It was developed as a direct response to community perceptions of safety and crime associated with graffiti and vandalism and the social and environmental costs incurred by Council and the community as an outcome. A multi-faceted approach continues to be the most effective strategy to reduce the impacts of graffiti and increase perceptions of safety.

Story behind the Baselines. How are we doing on the most important issues?

- Graffiti in Knox is decreasing, both in terms of the number of incidents and the total area covered. The most recent figures reveal a reduction of 20.48% from the 2010 result
- This reduction in graffiti may be due to a number of factors, including the renewed attention by council to the issue, and the efforts of local Victoria Police in targeting repeat offenders.
- The rate at which people perceive graffiti or other vandalism to be a problem in their neighbourhood is also reducing, but remains a concern to almost 60% of surveyed residents in 2011.
- In a recent survey carried out by Neighbourhood Watch, graffiti and vandalism were nominated as a local problem by 51% of Knox residents surveyed.

There is considerable debate as to whether the presence of graffiti implies an ‘unsafe’ community; it continues to figure, however, in surveys measuring perceptions of local safety, and for that reason must be considered an ongoing issue for the Council and the community.

**What are the key strategies to achieve this?**

There is a general consensus in the literature that the most significant effect of fear of crime is the reduced quality of life it imposes on those affected by it. As well as wide-ranging physiological and psychological effects, “fear of crime can prompt people to change their behaviour by adopting protective or avoidance behaviours” (Doran & Burgess 2012). Protective behaviours may include young people carrying knives, even if their fear is unfounded (Bondy et al 2005), or older people withdrawing from social activities in the community. A person need not have been a victim of crime or a witness to crime in order to form a view of safety in a particular location. Even low-level incivilities or harassment can have a huge impact on perceptions of safety, and this extends to alcohol-related antisocial behaviour (Morgan & McAtamney 2009). For example, a young family leaving a community event like Carols by Candlelight who is confronted by noisy, alcohol-affected people can affect the family’s decision to attend such events in the future.

Appropriate planning and design of urban environments can significantly improve the community’s sense of safety. A key approach to achieving these outcomes is through implementing best practice frameworks that have improved communities throughout the world specifically through Crime Prevention Through Environmental Design principles.

To increase perceptions of safety in a community requires a collaborative approach focusing on particular environmental and situational crime prevention programs – to reduce the opportunity for crime and increase the risk and efforts associated with offending. It also requires working with the community to gain a greater understanding of perceived unsafe areas that do not really experience high crime however make people feel unsafe and what interventions will work through an analysis of the evidence.

**Story behind the Baselines. How are we doing on the most important issues?**

- Reported crime in Knox is falling, the current crime rate (2010/11) @ 4737 offences per 100,000 population, is 37% lower than the rate at the start of the decade (7579/100,000 in 2001-02).
- The crime rate has remained significantly and consistently below the State average.
- Knox residents report high levels of feeling safe during the day in their neighbourhoods, but feel much less safe at night, particularly on public transport.5
- When asked what makes them feel unsafe, the most common reasons given by Knox residents are groups of people – ‘young,’ ‘weird,’ ‘gangs’ or ‘undesirable’ – loitering or ‘hanging around’. Issues around young people made up the second largest category (there was some crossover with loitering), and not far behind was environmental amenity factors such as poor lighting, seclusion, and litter.6

A recent Neighbourhood Watch survey of Knox residents found that 31% of those surveyed mentioned public transport (particularly train stations) as a crime and safety concern in their area, with 30% deliberately avoiding that place or situation due to fears for their safety.

Community Safety Plan Action Plan Priority 8 – Young people and adults are resilient and have high levels of emotional and psychological wellbeing (Mental health)

| Desired Outcome | Young people and adults are resilient and have high levels of emotional and psychological wellbeing |

Population – who are the people you are targeting?

Young People and Adults

What would the results look like?

- Young people and adults have low levels of stress and are resilient.
- Young people and adults have rewarding, productive relationships and are supported by the community.

Indicators: How can we measure?

Measures of psychological distress – (Community Indicators Victoria)
Emergency Department Presentations for Self Harm Injuries, 2006-2008
Knox School Focused Youth Service report 2009: areas of wellbeing concern

Partners

Headspace, Victoria Police, Community Health Sector, Neighbourhood Houses, Local Media, Communities That Care collaboration, Churches, other mental health service providers in Knox including Medicare Local, Council teams – Knox City Council Youth Services.

What are the key strategies to achieve this?

Through a community safety lens and working with identified partners their needs to be a focus on supporting and skilling community groups supporting people with mental health issues in their services, such as neighbourhood houses. Mental health as such is not a community safety issue however from a holistic perspective high numbers of vulnerable young people who are self harming are at high risk Through a collaborative approach actions will focus on programs and initiatives that can support or advocate to support ongoing programs or resourcing for new initiatives that are a gap in the Knox community.

Story behind the Baselines. How are we doing on the most important issues?

- Mental health disorders are the second highest cause of death and disability (burden of disease) in Knox for both males and females.7
- Knox has a high rate of emergency department attendance and hospitalisation for self-harm injuries, particularly in the under-25 age group.
- In the 2009 Knox SFYS report secondary school students, teachers and youth agencies rated mental health as their top area of wellbeing concern
- During the community consultation to inform this plan mental health was identified as a growing community safety issues by participants, and young people were felt to be particularly at risk.

In particular Neighbourhood Houses advised they were experiencing an increase of customers who have mental health/behavioural issues attending programs and staff/volunteers do not feel adequately equipped to manage episodes or difficult behaviour particularly in young people.

7 Knox Community Health & Wellbeing Profile 2009-2013.
Community Safety Plan Action Plan Priority 9 – Families are supported to prevent problem gambling (Problem gambling)

**Desired Outcome**
Families are supported to prevent problem gambling

**Population – who are the people you are targeting?**
Families

**What would the results look like?**
- Families gamble responsibly.
- Families have financial capacity to support adequate living standards.

**Indicators: How can we measure?**

PLEASE NOTE: Due to changes in Victorian Legislation in 2012, the number of Electronic Gaming Machines (EGM) in Knox will be reduced over time. Therefore EGM losses cannot be compared to current EGM levels and losses.

Data Development Agenda/ further research:
Losses from online gambling in Knox.

**Partners**
Victoria Police, Knox City Council Social Policy and Planning, Problem Gamblers support services for Knox Residents, Department of Justice (Victorian State Government).

**What are the key strategies to achieve this?**
Problem gambling is a very complex issue that most communities are dealing with – through a community safety lens the major focus for actions will be developing preventative community education programs and partnership initiatives. There also requires further research and data development to gain a meaningful understanding of the true impact of gambling including problem gambling in all forms on the community in order to develop programs from a evidence base. Continue discussions with community partners to develop and enhance Council’s role in relation to this issue from a community safety perspective.

**Story behind the Baselines. How are we doing on the most important issues?**

Gambling, if undertaken responsibly, provides a leisure activity. It contributes to employment and economic activity. It is also an important source of taxation revenue for State governments. However, there is ongoing concern about the social and personal costs associated with problem gambling and subsequent impacts on the overall health and wellbeing of families and communities. Examples of these impacts are outlined in Appendix C.

Discussion of problem gambling generally tends to focus on Electronic Gaming Machines rather than other forms of gambling, as this type carries the greatest risk of harm.

- As at August 2011, Knox had 865 EGMs in 11 venues. Losses from these venues reached $84 million in 2010/11.
- In the same period losses at Maroondah totalled $68 million, and $31 million in Yarra Ranges.
- Since 1992-93 $1,737,000,000 has been lost on Electronic Gaming Machine’s in Knox, the 6th highest total for all Victorian municipalities.
- Gambling machine density and rate of losses tends to be higher in the more disadvantaged areas of Knox.

In 2009 the Productivity Commission inquiry into gambling found that Australians spend nearly $12 billion a year on poker machines and 75% of people with a serious gambling problem played poker machines. Electronic gaming machines (Electronic Gaming Machines) or poker machines are installed in easily accessible venues more commonly located in low income areas targeted at vulnerable individuals. For these individuals, EGMs provide an escape from their problems which can lead to excessive spending of money and time on gambling. The design and accessibility of Electronic Gaming Machines contributes to this by providing an easy way of making high average bets. Gambling is also linked to anxiety, depression, excess alcohol and tobacco usage, and increased suicide risks which are factors that exacerbate problem gambling. These factors also cause negative social and economic outcomes as a result of arguments, relationship breakdown, loss of income, inconsistent work behaviour, and loss of money and property.

Crime can be a cause or a result of gambling and there is an established link between problem gambling and criminal activities, such as fraud, robbery and theft, drug offences, violent crimes and murder. A 2008 study of all Australian convictions Problem gambling can lead to family dysfunction and domestic violence including spouse and child abuse.

Through community consultation online gambling was considered a growing problem that lacks reporting or awareness.
